## TÓM TẮT:

Thai Nguyen is a mountainous province northeast central Viet Nam, was blessed on geographic location and natural conditions here are so rich flora, especially medicinal plants. However, in recent years due to indiscriminate exploitation, along with the illegal export of medicinal plants should spread your pharmaceutical sources are increasingly depleted, many species have become extinct or threatened with extinction. For the scientific basis of conservation and improve people's attention to the preservation and development of precious resources of medicinal plants in Thai Nguyen, we have conducted research and collected 24 medicinal plants you are subject to protection under the 18 genera, 17 families of the 2 branches of vascular plants (Polypodiophyta, Magnoliophyta) are ethnic minorities of Thai Nguyen province to use as medicines. In particular, Magnoliophyta branches are 22 species of 17 genera 16 families and Polypodiophyta branches only 2 species of 1 family, 1 genus.
